

CASE STUDY

PEGASUS OPERA II WITH CIS DELIVERS FOR DEVAR PREMIER FLOORING

Devar Premier Flooring is a company based in west central Scotland that has been providing flooring solutions to its clients in both the public and private sectors for over thirty years, since the company was founded in 1978.

In that time the business has achieved impressive growth to become one of the UK's leading flooring contractors. Devar offers a complete flooring service, from design to installation and maintenance and attributes its continued success to a combination of expertise and investment in training and technology, as well as a strong partnership approach to working with customers.

The steady growth in the business meant an ever increasing number of transactions to manage, along with greater volumes of sales information that required processing. Devar had been users of Pegasus Opera (16) for some time and felt that, while the system was a highly effective accounting tool, they now needed to take advantage of the latest technology offered by Windows and to enable them to manage the increasing number and complexity of projects with which they were involved.

The decision to upgrade to award winning Opera II and Pegasus Construction Industry Solutions delivered a massive increase in value to Devar, through the integration of their Pegasus Opera II accounting system with the Pegasus Construction Industry Solution (CIS) enabling them to effectively manage Quotations, Contracts, Project Costs, Payments & Retentions and VAT.

It also provided them with a straightforward but very powerful reporting tool using the award winning Excel reporting tool, XRL.

Brian Devine, the Finance Director at Devar, explains:

"Opera (16) had served us well, but with the continued growth and success of the business we reached the point where there was a need for increased reporting and more effective contract cost and project management.

"Opera II is versatile, user friendly and delivers impressive functionality, combined with flexible analysis and reporting. The upgrade from Opera (16) was seamless and there was no need for manual data conversion or extensive user training. The powerful reporting allows us to identify and monitor profitability trends as well as the day-to-day work of processing invoices, credit notes and receipts.

"The inclusion of Pegasus CIS in the upgrade gives us complete control over every aspect of contract management, from contract costing, timesheets and payment applications, through to VAT invoicing and cash receipt matching. The functionality that CIS offers ensures that we can efficiently meet our obligations in terms of monthly subcontractor returns to HMRC.

"The team at Castle understood what we were looking for and were able to add a lot of value to the implementation. The upgrade and implementation of the new system was smooth and hassle free. We now have a system that is delivering real measurable efficiencies to our business."
